Changes to One Flow standby behaviour after update version 2.5.

Update version 2.5 has changed the standby behaviour of the One Flow radio. You now have 2 options to choose from. '**Standby**' and '**Low power standby**'

If you make a short press of the power button this will take you to '**standby**', this will keep Wi Fi active and Pure Stream is ready to use.

If you make a long press of the power button it will take you to '**Low power standby**' you will see a standby icon appear on the screen. In low power standby you are not able to activate the radio via Pure Steam from your iOS or Android mobile device.
