How to install the latest firmware onto your Avalon 300R Connect

Avalon can install firmware automatically, or this can be done manually via a USB memory stick.

Automatically:

If you have connected Avalon to your network then Avalon will automatically check to see if there is an update via the internet.

Manually:

If there is software available it will be posted [here](#) this will allow you to upgrade using a USB stick.

When you download the file to your computer simply open the files and copy to a blank formatted USB stick. Insert the memory stick. The upgrade is started by selecting **Menu** (on the remote) > **System** (The blue button) and then press the red button on the remote control, now follow the on screen instructions. Note that it may take around five minutes to complete.

Note: You are unable to upgrade the software while Avalon is recording
