How to set "Date" and "time" on Move 400 so it will save, unless manually changed?(Excluding UK Customers)

Pure Support - UK - 2015-12-14 - in DAB Specific

In italy if you are listening to an Fm broadcast you may experience the wrong date and time(with a few exceptions like RAI, RTL102,5 etc) we added on the Move 400D the function RTC (Real Time Clock) with which you can choose if you want to set the date and time automatically and in which mode.

For use in italy we advise to select "only digital" if you are in an area with digital coverage and you will receive the correct time, or "None" (and then, setting the time and date that is shown on the display and / or changing it manually).

For choosing your preferred option you must do the following

1. Press **menu**
2. you must slide < > until you find "time" option and press **select**
3. Slide< > until "synch.clock" and press **select**
4. slide < > until you have selected your preferred setup

Digital and Fm, Only digital, only FM, none
