My DiscovR speaker is not connecting to the Wi-Fi network. How do I fix this?

Pure Support-UK - 2019-06-03 - in Wi-Fi/Bluetooth connectivity

- Check your speaker and mobile/controlling device are connected to the same network.
- If your router supports both 2.4 GHz and 5 GHz, ensure both are connecting to the same band.
- Check to see if other devices can connect to the router.
- Reset the router.
- Move your DiscovR away from possible sources of interference (for example, microwaves, TV sets or cordless phones)

Note: Depending on the mobile device you are using, some may require location settings to be enabled. If the above steps do not resolve this, please enable this before restarting the speaker setup process.
