## Siesta display brightness too low

Pure Support - UK - 2019-02-23 - in All Other Radios

### **The display brightness on my Siesta radio is too low**

We specifically made the decision to keep the functionality of the radio as simple as possible and minimize the number of options and as a result of this, the display brightness has been carefully tuned to meet the vast majority of ambient settings, and is only controlled via the '**Auto-Dimmer**' at the front of the radio.

There is no manual control over the brightness settings on this radio I'm afraid.
