Why do I occasionally see an amber light on my Contour 200i?

Check that your Contour 200i Air is running the latest firmware to ensure you experience the best from your product!

After 75 minutes of the Contour device being in standby, the Contour will perform an automated routine that checks its current software version against the latest available version on our update servers - to ensure it is up to date and running the very latest software version. The process only takes a minute or two, and during this time you may see the front LED glow amber in colour.

When this process is complete the LED will return to its static red 'sleep\ standby' status.
